Evidence Technology partners with Senetas to deliver defence-grade secure video conferencing

May 25, 2011 – The directors of Australia’s world-leading data protection company, Senetas Corporation Limited (ASX:SEN), today announced that the company has signed a partnership agreement with Evidence Technology who will use Senetas encryptors to provide defence-grade security on its video conferencing solutions.

Evidence Technology is a leading provider of audio visual, video conferencing and digital media management tools in Australia and New Zealand to organisations that who deal with confidential data including courts, police, law firms, hospitals, government agencies and schools.

Under the partnership, Senetas will provide tamper-proof encryption to Evidence Technology’s video conferencing solutions that operate over open, standard IP networks to offer the firm’s clients the highest level of security for data in motion.

As part of the partnership with Senetas, Evidence Technology has attained Defence Recognised Supplier status under the Australian Government’s Defence Recognised Supplier Scheme.

Evidence Technology CEO Peter Carter said: “We have been working heavily with very low latency and telepresence systems for government and enterprise. What made Senetas encryption technology particularly attractive is that it offers the highest level of data security without reducing the performance of our high-definition conferencing solutions.”

Senetas CEO, John DuBois said “Evidence Technology is widely regarded as a leader in the provision of audio visual and video conferencing solutions for specialised, high-security government and enterprise application in Australia and New Zealand.”

“The solutions and professional services Evidence Technology provides to our justice, legal and law enforcement sector in particular are considered world-leading. The use of our internationally certified encryption hardware to ensure that information essential to the working of justice and our courts cannot be tampered with is an important vertical market application.

“While encryption is often deployed to prevent the extraction of information from networks, it also prevents the injection of data,” Mr DuBois said, adding that the Evidence Technology solution would be of interest to Senetas’ existing clients in Australia and abroad.

“Senetas does not reveal publicly details of where we have encryptors installed, but the company has long-established relationships with police, law enforcement, border control, corporate regulators and other agencies in Australia, Asia and Europe and this new partnership with Evidence Technology will potentially be of great interest to this sector.”

ENDS

Senetas Corporation Limited (ASX Code: SEN) is an Australian ASX-listed public company and is the world’s leading developer and supplier of high speed network encryption hardware products.

Senetas encryption technology has been independently tested and accredited by the world's leading agencies and now offers the only dual accredited encryption hardware - certified to both FIPS 140-2 Level 3 and Common Criteria EAL4+. Senetas' AES 256-bit encryption would take billions of years to crack using brute force attack.

Senetas is now represented in more than 40 countries. Customers include Government, military and law enforcement agencies in Australia, USA, Middle East, Asia, and the EU, plus leading financial and banking institutions.

About Evidence Technology

Operating since 1999, Evidence Technology is a premier provider of integrated audio visual communications solutions in Australia and New Zealand. Specialists in the design, installation, modernisation and management of audiovisual systems, Evidence Technology's services include acoustic and audiovisual integration, videoconferencing, recording systems, digital asset management systems, forensic software and control systems. Since 2006, Evidence Technology has upgraded the AV systems of more than 160 courtrooms and justice facilities including the High Court of Australia and New Zealand and installed more than 10,000 videoconferencing seats. It currently services 600 sites in the region including courthouses, police stations, parliamentary chambers and council facilities, and lists many major corporate brands amongst its clients. A privately-owned company, Evidence Technology has offices around Australia and New Zealand. For more information about Evidence Technology, visit www.evidencetechnology.com.
